DETAILED ACTION

Claim Objections

1. Claims 1-6 are objected to because of the following informalities: The claim should begin with a capital letter and conclude with a period. Periods may not be used elsewhere in the claim. Appropriate correction is required.
2. Each claim has not been provided with the proper status identifier. The status of every claim must be indicated after its claim number by using one of the following status identifiers: (Original), (Currently amended), (Canceled), (Previously presented), or (New).

Claim Rejections - 35 USC § 112

3. Claim 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 1 recites the limitation "the healing postulate" in the second line. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,274,787 ("Downing").

As regards claims 1-6, Dowling discloses a transparent, span-over the wound bandage comprising a rigid, transparent dome (note col. 4, lines 61-64). The dome may be vented with holes or openings to allow for air circulation (note col. 5, lines 53-58) and may have flanges (note members 82) and tape (adhesive 84), which overlie the flanges to secure the device to the skin of the user. The device is **capable** of one time use, capable of being disposed, and capable of have one side of the taped flange lifted for desired purposes such as cleansing or swabbing and then re-taped (*i.e.*, the taped flanged is capable of being replaced on the user). Also, the dome is **capable** of defining a wound such as a healing pustule to dry scab as the area of protection, is shaped to prevent touch of the wound site during showering or bathing, is **capable** of fitting over any vaccination site, is formed as a single cup with two side flanges to allow the tape (adhesive to secure the device to the skin), and is **capable** of being formed from environmentally safe material allowing for disposal in the regular trash.

Response to Arguments

6. Applicant's arguments filed 4/27/2006 have been fully considered but they are not persuasive. Applicant argues that Downing is not a valid reference because it does not meet the claim limitation because it is hermetically sealed. The examiner refers the applicant to column 5, lines 53-58, which states that air vents can be provided to permit airflow. The examiner contends that Downing's bandage is capable of protecting a smallpox vaccination site, which could be considered a wound.

Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
